## Problem

- Home surveillance systems in the market tend to be *expensive*
- These *costly* systems have functions that are often *not fully utilised*

## Target

- For many purposes, such as for *working adults* checking their home while at work.
- For ones who need no more than *live footage* and *multiple camera management*

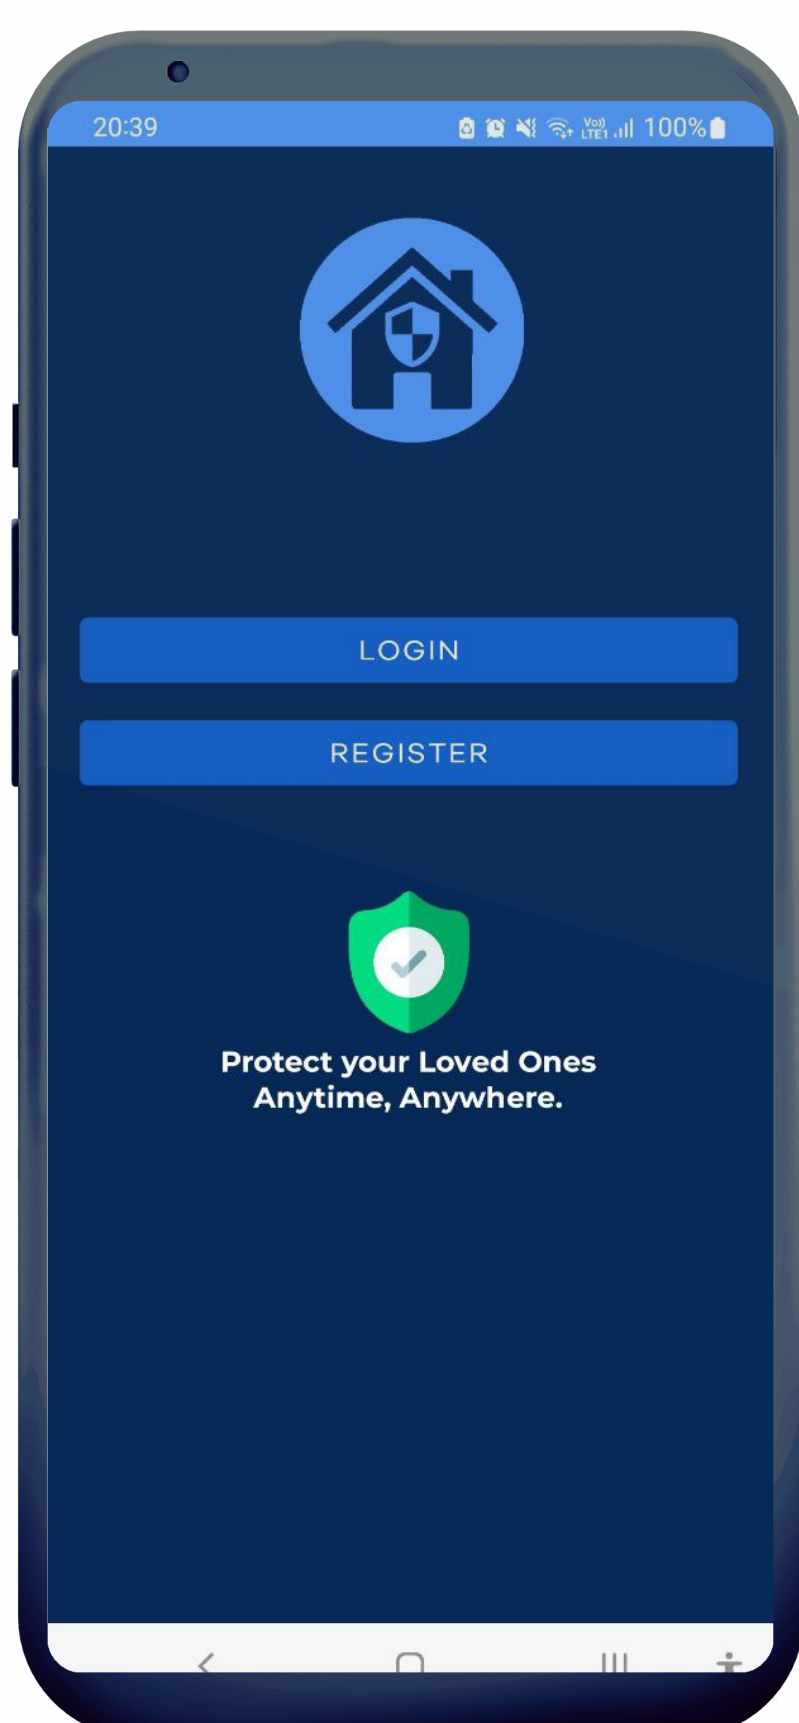

## ABOUT THE APP

This application provides the user with control over all their connected cameras, serving as a management tool for the surveillance system.

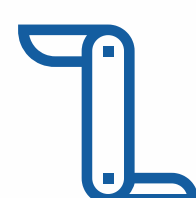

This connection allows the user to access live footage of each camera, all from their mobile device. Users can now have peace of mind by having a watchful eye, be it watching over their home entrance, their kitchen stove, or the current progress of their 3D print!

### User Authentication

Simple and intuitive register and login process

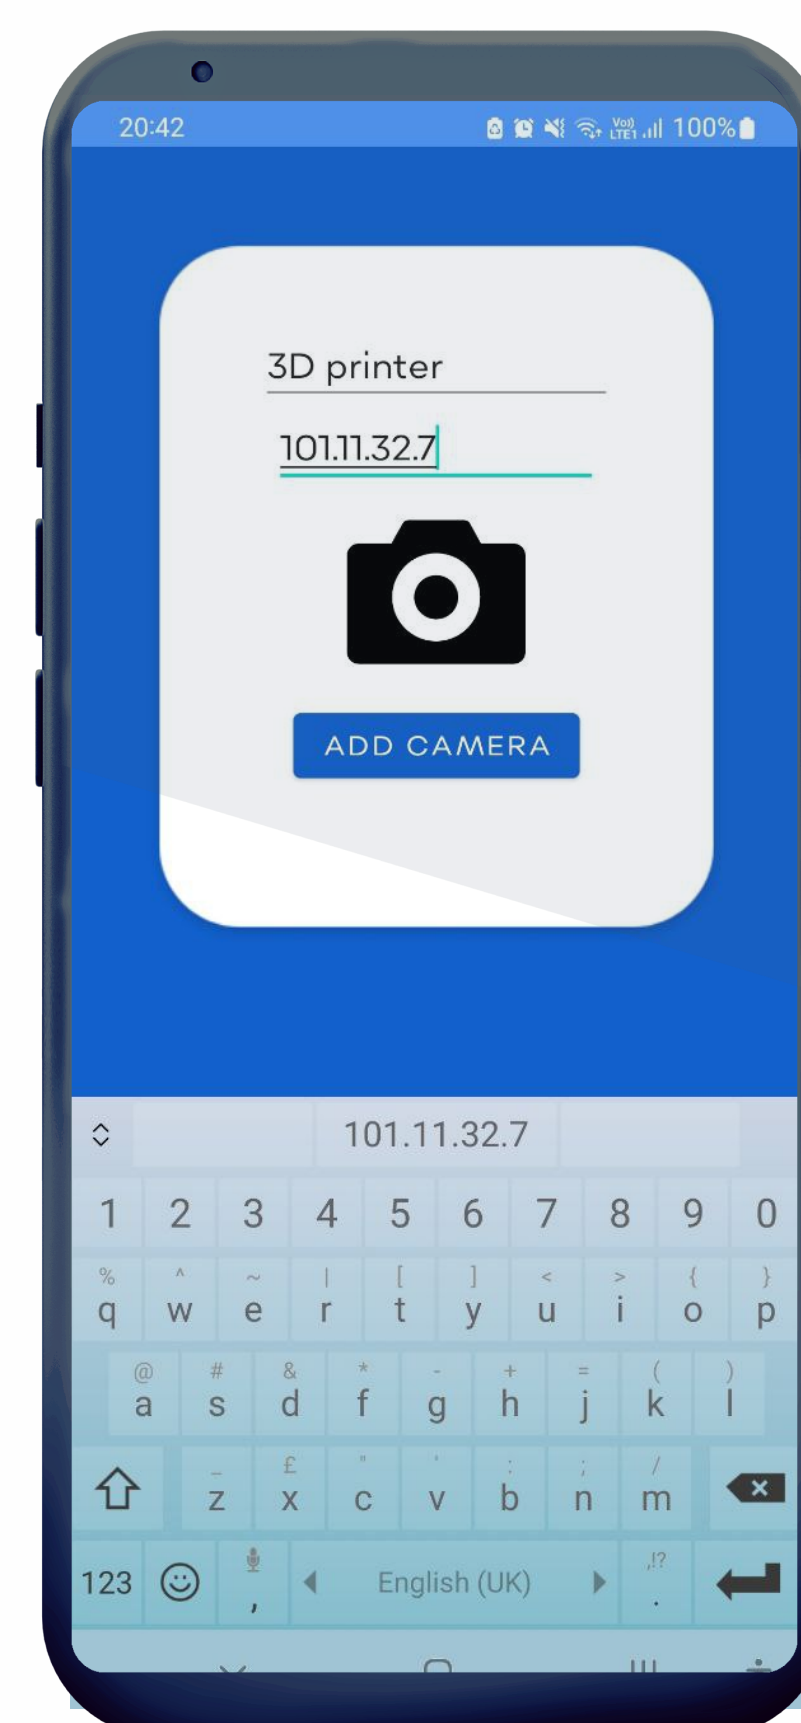

### All-In-One toolbar

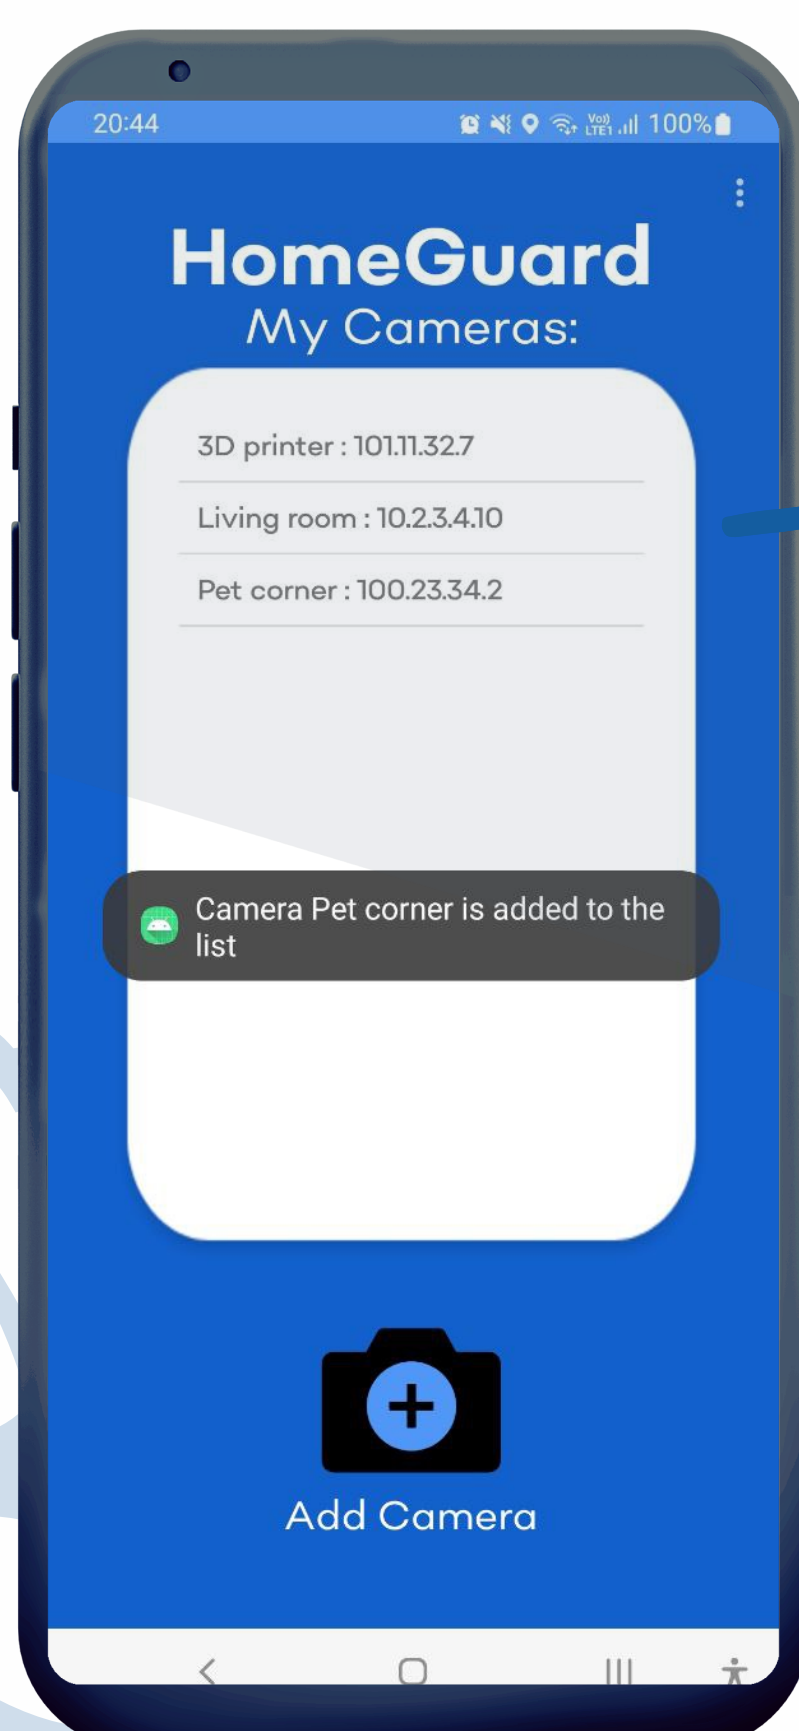

Add new cameras with ease

### Add Cameras

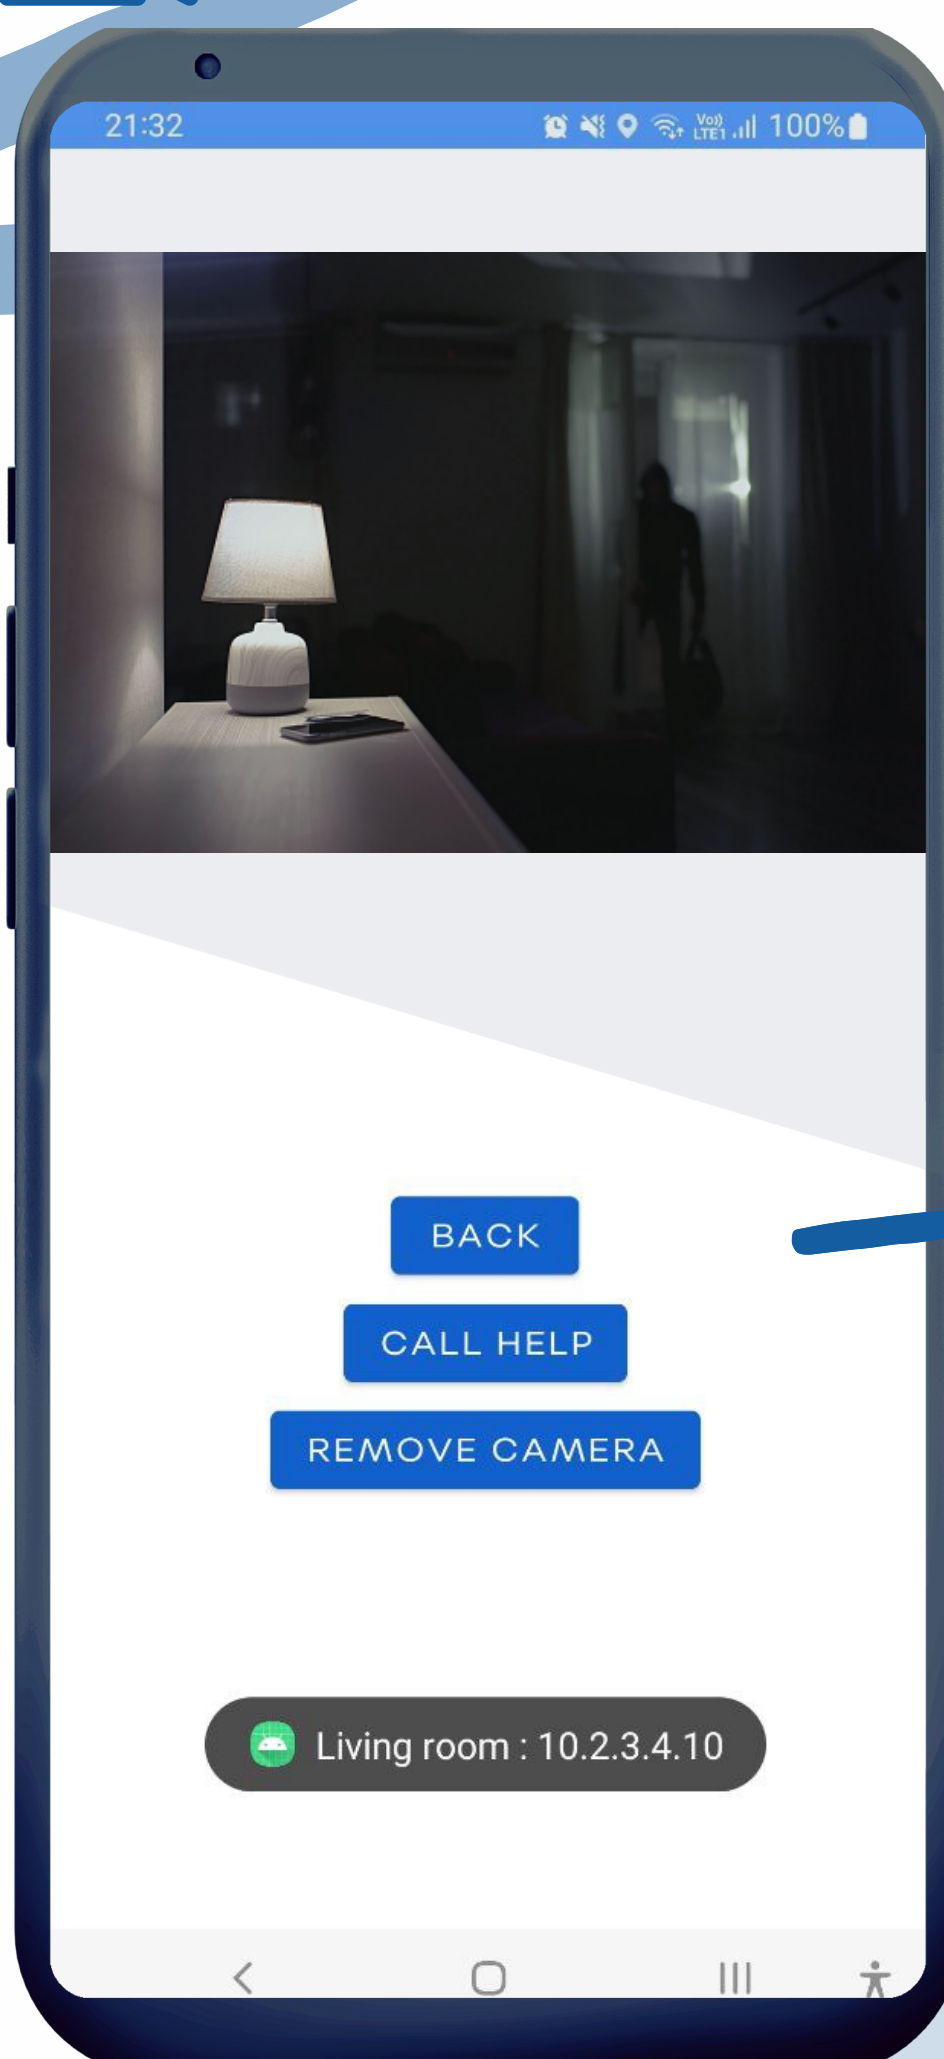

### List of Cameras

Watch live stream at the press of a button

### Seamless live stream

Speed dial for help!

### Emergency Contact
